
1998 HOT STUFF!

High Performance Ammunition for Self Defense and Law Enforcement

1311 Industry Road, Sturgis SD 1-800-626-7266

CorBon is the leader in high velocity ammunition, generating maximum performance from every loading. CorBon is proud of this reputation and is willing to put that velocity right on the box. These are real velocities, from real guns - not just test barrels. Every company has to have a niche in the marketplace. Peter Pi, the founder of CorBon, decided that someone had to be the best and built his company around that idea.

The faster a bullet is traveling, the more energy created. Energy developed at the muzzle must be transferred or "dumped" into the target to be effective. Energy transfer is aided by bullet expansion. The higher the velocity, the more rapidly the expansion - the more rapid the expansion, the more effectively the energy is expended in the target. This explosive expansion dumps the available energy quickly, creating tremendous shocking power and causing the perpetrator to cease doing further harm, thus STOPPING POWER. Stopping power means safety.

Hollowpoints that are moving too slow, or limit energy transfer with a "controlled expansion" design can over penetrate - going straight through with little effect. Energy that passes through the selected target is wasted energy and can cause harm to unintended persons or property. Your intent is to STOP the aggressor that is bent on doing harm to you. Regardless of the situation, you will have to account for your actions and every round that is fired.

Don't be misguided by those who claim their bullets have some magical or mystical performance advantage, or that they can make a reduced power load with increased performance.

There continues to be a misconception that a heavier bullet somehow has more energy and that a long deep wound channel is necessary. That may be true in a hunting bullet, but in close quarters combat, the trade of less weight and added velocity is a positive increase in energy. Energy is energy and if effectively transferred into the target - it does not matter whether it is energy from a 9mm or a .45 ACP.

CorBon ammunition is tested against common barriers. When shot through four layers of heavy material, (including leather) the CorBon bullets retain adequate velocity to reliably expand. Tests against windshield glass and car doors proved that the high velocity CorBon bullets did not deflect from their intended path and still expanded well into a gelatin medium. Car doors and windshields are no barriers to CorBon high velocity ammunition.

Design

With the success of the clean, deep hollowpoint design of the 9mm/115gr JHP and 40S&W/135, CorBon has followed this into other bullets. The new **9mm/125 gr Jacketed Hollowpoint** gives shooters a slightly heavier offering but still retains the violent expansion of its 90 and 115 grain brothers. This bullet is available in the 357SIG, 38 Super and 356TSW.

38 Special & 357 Magnum follow this same successful design in a new look. These bullets no longer sport the exposed lead tip that kept getting dinged and dented. Expansion is reliable and effective even from the subnose revolver.

.45ACP From the speedy 165gr and 185gr JHP load through the hearty 200 and 230gr JHP, CorBon uses the same proven design.

44 Magnum & 44 Special Your favorite heavy duty six-gun can now be an effective self-defense weapon with the active 165gr JHP. Nobody but CorBon offers such an effective bullet for these classic wheel guns.

STOPPING POWER

Test results conducted by writers, law enforcement agencies and ballistic experts confirm the effectiveness of CorBon ammunition. Pick up almost any gun magazine and you will see the CorBon loads going head-to-head with the larger manufacturers – and coming out on top. In the latest book published by Evan Marshall & Ed Sanow, they investigate actual police encounters and determine the effectiveness of the bullet used. They rate the stopping power of the CorBon loads as top in nearly all their representative groups. Marshall states *"If you're serious about self-defense, you should carry serious ammunition. As far as the authors are concerned, COR-BON is the most serious ammo of all".*

GUN*TESTS Magazine (which takes no advertising) reported in its Aug. 1996 edition on Handgun Ammunition that in reference to CorBon's 9mm/115gr JHP, *"This is, without a doubt, the most effective self-defense ammunition we have ever tested....Its cavity in the gelatin was twice the size of its nearest 9mm competitor".*

In July of 1997, Gun*Tests reported on .45 ACP Ammunition. Their headline proclaimed Cor-Bon 185-grain+P, 165-grain+P JHP's Beats Other .45 ACP Ammunition. The article goes on to say that *"These were the two finest rounds of the test. Of all the JHP bullets, they had the highest velocities, highest muzzle energies, largest cavities in the gelatin, and the most bullet expansion. Bullet expansion was in a class by itself, twice that of their nearest competitors. The cavities were shredded gelatin, a true measure of effectiveness, not a star-shaped cut".*

In Today's Most Popular Calibers, CorBon is a Top Rated Fightstopper

380Auto / 90gr JHP	1050fps	70%
9mm+P / 115gr JHP	1350fps	91%

1996 by Evan Marshall & Ed Sanow

400 COR®BON

The 400 COR®BON continues to be a quiet revolution in the industry. Cartridge designer Peter Pi recognized the universal appeal of the classic .45ACP, and combined this with the velocity advantage of the 40 caliber into one new cartridge - thus the concept for the 400 COR®BON.

The distinctive bottle-neck cartridge provides additional case capacity, better feeding, and with headspaceing off the shoulder, a tight bullet crimp can be used to get better powder utilization.

Any .45 can be converted to the 400 COR®BON with a simple drop in barrel. Modification of the frame is not required and the gun can just as easily be converted back to the familiar 45ACP if needed.

The 135gr JHP at over 1450fps and 630ft/lbs of energy is the most popular load. The rapid expansion is amazing with an extensive wound cavity and a optimum penetration of about 13 inches in ordnance gelatin. This load has an estimated Fuller stopping power index of 97+.

Added to the lineup is a familiar 150gr JHP load at 1330fps, a 165gr JHP at 1300fps and a bonded 155gr hollow point bullet for close range hunting or protection in the woods, and a 155gr Power Practice FMJ load for punching holes in paper.

Tactical Rifle

CorBon Tactical Operations Ammunition is a cut above the norm. Pin-point accuracy and explosive expansion assures that any encounter is concluded effectively. CorBon loads the ever popular 223REM with a Sierra 55gr Jacketed Hollow Point that has been highly effective where long-range critical placement shots are mandatory. This is not reloaded military ammo in a clean box.

Your options include a new 223REM 40gr JHP that combines super flat trajectory with utterly final terminal ballistics. The sharply pointed hollow point bullet is near ricochet proof. It has a very high velocity of 3800 fps and pin-point accuracy. For tactical use in close quarter urban environments it provides an added level of performance and reduces over penetration.

CorBon also makes available finely tuned .308 WIN tactical loads with 125gr JHP bullets. This precision manufactured hollow point bullet is extremely accurate, super effective, and require less sight adjustment due to a very flat trajectory. This 125gr JHP is up to any task that the tactical shooter would ask of it and more

The imported SKS rifles have often been hampered with poor quality full-metal jacket ammunition. CorBon solves this problem with the 7.62x39 125gr Jacketed Hollow Point @ 2400 fps.

The Unique 300 Whisper

The 300 Whisper is a specialty cartridge originally designed for the purpose of firing extremely heavy, accurate, ballistically efficient bullets at sub-sonic velocities with suppressed tactical guns. The 300 Whisper utilizes the 221 Fireball case necked up to accept a 30 caliber bullet. J.D. Jones of SSK industries, the inventor of the 300 Whisper and many other wildcat cartridges, kept the overall loaded length equal to the .233 Rem. so a M16 or AR15 can easily be converted with an upper assembly change.

CorBon loads the 300 Whisper with a 125gr JHP moving out at 2100fps. This is a great low recoil self defense load and works well on varmints and small game. A 150gr JSP is loaded to 2000fps velocity and is the preferred deer hunting load. It is a potent pill in a compact package and delivers more whoop than expected with the mild report.

The tactical 220gr JHP subsonic load is still the ticket for suppressed tactical operations.

BeeSafe™ Pre-Fragmented Safety Ammunition

BeeSafe is a very effective close-range ammunition especially suitable as an "in-house" load for personal safety and protection. Recoil is extremely soft for a bullet that backs such a devastating punch. The mechanical effect of the rapidly expanding shot creates superior knock-down energy and increased stopping power while maintaining standard pressures and reduced recoil.

The BeeSafe bullet has a round soft nose and can be carried in states and countries that restrict the use of hollowpoint ammunition. The reduced weight bullets reduce the muzzle flip and keep you on target for subsequent shots. Available in 8-round display packages in all the popular self-defense calibers - including the .32 ACP and 400CorBon.

COR®BON HUNTING

EXPANDED HUNTING LINEUP FOR 1998

The CorBon designed Bonded-Core style bullets are not just another pretty face. These are true heavy-duty hunting bullets of the highest quality. Each bullet is carefully weighted, swaged and inspected by hand to ensure that you have the strongest bonded bullet available. The soft lead core is heat soldered to the outer jacket to make a bullet that will not break apart - not even after hitting hard bone. Don't be fooled by gimmicks or 'magic' bullets. This is the bullet you need for deer, elk, moose and such. These bullets stay together when pushed to very high velocities - they expand producing excellent knockdown power and stay in one mass to provide deep penetration. CorBon's premium Bonded-Core bullets will never let you down.

The Penetrator™ was designed specifically for tough skinned, heavy muscled game. It carries a heavy full copper jacket over a linotype hard lead core. No expansion what-so-ever is wanted or expected from this design. It crashes through thick hide and breaks even the most awesome bone mass it encounters. A through-and-through hole is often the result - this bullet never fails, even if pushed to the highest velocities. The Penetrator™ was designed for bone-breaking power and has taken everything in Africa the continent has to offer - even Rhino and Cape Buffalo. But it is also the preferred load for other tough critters such as the large hogs and is an excellent choice for your sidearm in bear country.

"Peter, I would like to thank you again for the loads that you prepared for me. They performed very well, especially the penetrator for the Casull, which I used on the rhino, both buffaloes, and the giraffe." Sincerely; Mohamed Tobah

Though solid lead bullets have been used since the dawn of the firearm. CorBon's Hard-Cast hunting bullets are not just another lead bullet. These bullets are made with premium linotype hard lead using the famous JD Jones flat nose design. They fly straight and provide excellent shocking power and deep penetration-with no expansion. A good traditional choice for breaking down game.

Powerhouse loads for the 454 Casull

The mighty 454 Casull was envisioned by Dick Casull over 40 years ago. His desires for the ultimate power in a pistol capable of handling pressures in excess of all the common rifle cartridges lead directly to the superb Freedom Arms Single Action revolver. CorBon's heavy bullet 454 Casull loads exceed the power delivered by the legendary buffalo guns of old.

CorBon loads six different powerhouse loads for this highly popular cartridge. Astute big game hunters choose the bonded-core bullets in either the 265gr or 285gr loads for their flat trajectory and excellent stopping power. The 300gr Jacketed Soft Point is the pick for closer game in heavy brush where the flat trajectory is not mandatory.

For very large and dangerous game CorBon offers three heavyweight loads. The 320gr and the 360gr Penetrator bullets have been used around the world on everything that can be taken with a handgun. The hallmark of these loads is unparalleled penetration combined with bone smashing power.

The 335gr Hard-Cast flat point offers outstanding penetration with a traditional cast bullet. The flat nose adds real "smack" to the equation.

The 454Casull is a cartridge that is here to stay. Other manufacturers are making guns to handle the power and CorBon has the power demanded.

Bullet recovered from a large Oryx. Bullet broke the facing shoulder and was found just under the skin on the opposite side.

98% weight retention.

44 Magnum - Extra Punch

The 44 Magnum has 40 years of hunting experience under its belt. It is the hunting caliber from which all others are judged. CorBon loads a full lineup to meet any situation. There are lots of companies providing loads for this cartridge. CorBon takes the 44 Magnum seriously.

The light and super fast 180gr JHP and the 240gr JHP are the ticket for varmints, small game and light deer. The 260gr and

280gr Bonded-Core loads are the pick of the litter for serious deer hunting with a handgun. They do their job with authority and are about as good of an all-around combination as you are going to find. If your deer hunting includes big bucks, elk or even moose, these loads give you the extra range and flat trajectory necessary of tough hunting situations. These bullets are not just good - there as good as you can get. The design allows the lead to roll out into a tissue-tearing mushroom. These are exceptional loads that can be carried for almost any situation.

The 300gr Jacketed Soft Point bullet is the choice for closer hunting in heavy brush where the range is restricted. The extra heavy weight gives the hunter huge knockdown power for bigger game.

Nothing made for the 44 Magnum tops the 305gr Penetrator load for power and penetration against dangerous and hard to stop game. If you live or hang out where the game has big teeth and claws, load your 44 Magnum with the 305gr Penetrators. This is not normally a deer hunting load - this is serious medicine for dangerous critters.

The 320gr Hard-Cast is a super hard lead bullet. It combines superb accuracy with deep penetration and a big time thump from its sharp edge flat point. There is no expansion with this load and is best selected when bone breaking power is needed.

Loaded with one of CorBon's high performance loads; your 44 sixgun is back to the power Elmer Keith envisioned.

44 Magnum 180gr Jacketed Hollow Point

CorBon has given the traditional 45 COLT hunting loads worthy of the designation: Magnum. These are true high performance loads with the attached +P as an additional caution. In the appropriate modern hunting pistol, our .45 COLT Magnum loads give near 44 Magnum performance with markedly less recoil.

This is NOT plinking ammo, this load should only be used in those guns that have the steel to handle the power. Guns in .45 COLT that are built on heavy duty frames, such as the Ruger, Freedom Arms, Colt Anaconda, and Thompson-Center Contender will handle this load with authority. This load is NOT intended for handguns such as Smith & Wesson, Colt Single Action Army, or the Colt clones imported single action revolvers. Common sense needs to prevail!

The still popular .45 Winchester Magnum

There are those who claim the 357 Magnum is not adequate for killing deer. With our 180gr Bonded-Core bullet you'd better have freezer space ready my friend. Assuming you can shoot straight and take shots well within your ability, this load will kill deer deader than canned tuna. This load performs well on a variety of small to medium sized game and packs enough punch down range to make life very exciting.

Some states put energy restrictions on what is a legal firearm to hunt with. In Colorado, for example the 550 ft/lbs of energy at 50 yards dictates that you use the Penetrator or the 180gr Bonded load. In other states it is 500 ft/lbs of energy at the muzzle. In this case all of these loads could be used.

The 200 grain Penetrator or its hard-cast cousin are often carried in the sidearm for bear protection while hiking or fishing. **They can keep you from being on some large bears dinner menu.**

357 Magnum - Special load for Freedom Arms 353

The special loads designed specifically for the Freedom Arms 353 are essentially the standard 357 Magnum case - stuffed to the max with powder. The bullet is seated longer, preventing these high pressure loads from being used in a standard 357 Magnum. The Freedom Arms 353's are built like tanks and can easily stand the extra pressure that these loads generate. These loads push the heavier 357 Magnum bullets up to near the power range enjoyed by the famous 44 or 41 Magnums.

440 CorBon Magnum

Available Soon

The 440 CorBon Magnum combines the excellent ballistic coefficient of the 44 caliber bullets with the case capacity of the 50AE. This marriage produces a hyper-velocity cartridge with the advantages of both parents. The bottleneck cartridge is a super idea that produces a hunting round capable of very flat trajectory and amazing down range power. This design works well in single shot pistols or the hefty autopistols.

Imagine if you will a semi-automatic handgun with an eight round magazine - the power of a 260gr bullet screaming along at over 1400 fps producing 1136ft/lbs of energy at 100 yards. This is serious fire power in a handgun, but the combination of gun weight and higher velocity tames the recoil admirably.

Work on cartridge development has been completed and several test guns are in field testing. Barrels are under construction and several manufacturers are readying guns for production.

400 CorBon

Red Hot

The 400 CorBon cartridge has been adopted by shooters around the world. Its acceptance has been nothing short of amazing. Shooting enthusiasts have purchased a barrel conversion and transformed their favorite 45 ACP pistols to 400 CorBon and are now enjoying the 400's exceptional accuracy, high velocity and superior self defense stopping power.

The 400 CorBon is the brain child of bullet maker Peter Pi. While the 400 CorBon wasn't developed to be a hunting cartridge, it does a good job as a backup gun or side arm against small and medium game. Performance is in the ballpark of the lighter loads in 357 Magnum or 10mm. CorBon loads a 155gr Bonded hollowpoint bullet that goes out there starting at about 1330 fps. This bullet is considered to be a controlled expansion bullet that opens to give good shocking power and yet maintains its weight to allow the energy to give adequate penetration on a variety of game.

COR-BON loads premium hunting ammunition for several rather esoteric pistol cartridges including the 10mm, 41 Magnum and the .451 Detonics.

The 7.62x39 is loaded with a quality 150gr soft point bullet that can wring out the capabilities of this cartridge and make it a better than average hunting combination.

The 300 Whisper is an amazing cartridge from the fertile mind of JD Jones. It packs a lot of punch from its misleading size and makes an excellent close-range deer gun that is extremely accurate with very, very modest recoil.

Single Shot Hunter

New from Cor-Bon is the Single Shot Hunter line of ammunition. This new line incorporates a specially designed bonded-core spitzer bullet and fast burning powder to give optimum performance from the shorter barreled single shot pistols. This is not just repackaged rifle ammunition.

Single Shot Hunter
Specially Designed Ammunition For Single Shot Pistols
10 Rounds
308 Winchester
150gr Bonded Spitzer SP
Velocity 2625 fps / Energy 2296 ft-lbs
WARNING: Not for use in lever action rifles.
COR-BON BULLET COMPANY
1311 Industry Road
Sturgis, SD 57785
(800) 626-7266

These loads were built and tested from the ground up for use only in single shot pistols. The bonded-core bullet uses a specially designed copper jacket that can withstand high velocities, yet is somewhat thinner with a different taper to expand reliably at a lower velocity range. While rifle ammunition used in a short barreled pistol will sprue out unburnt powder and the heavier jacket required of rifle ammunition will restrict the expansion.

CorBon has selected premium powders to give high velocity, but with significantly less recoil. Pistol hunting should be a challenging and rewarding sport. You shouldn't have to be punished by bone jarring recoil. Cor-Bon gives you options that have never been available before. No other company takes the extra effort to produce such a special load. Hunting with pistols is a growing sport you should not ignore. Sportsman enjoy the challenge of stalking and getting close. Cor-Bon is a premium line that caters not only to the recreational shooter but to the serious big game sportsman that demands the best when they take to the field.

The single shot hunter loads use pointed soft point "spitzer" style bullets. They cannot be used in tube feed magazines.

The new Thompson-Center Encore™, the Lone Eagles, MOA pistols and several short-action bolt pistols are now being chambered in such heavyweight cartridges as the 30-06 Spfd. the .308, the 7mm-08 etc. The flat shooting accuracy and extended range that these popular cartridges bring to the spectrum are sure to expand the number of sportsmen hitting the field armed not with a rifle, but with a special single shot pistol.

CorBon believes in the future of the sport and tries to produce the finest hunting ammunition available.

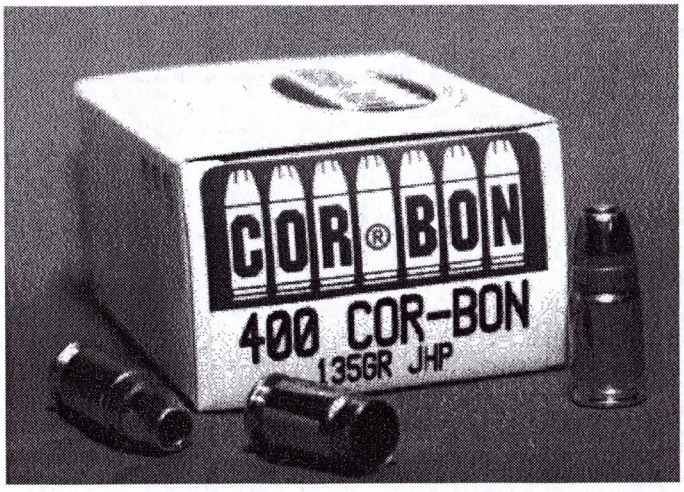
A NEW CARTRIDGE DESIGN - THE 400™ COR®BON

BOOMING SUCCESS!

COR·BON Bullet Company is the leader in high velocity ammunition for self defense, law enforcement and special operations. Peter Pi, president is proud to announce the company's first-ever new cartridge, a futuristic concept, developed to substantially enhance the performance of existing pistol designs.

The new 400 COR·BON has been designed as a modern high performance self-defense handgun round. The distinctive bottle-neck cartridge provides additional case capacity, improved feeding, and with headspacing off the shoulder, a tighter bullet crimp can be used to get more efficient powder burning.

Performance of this cartridge is impressive. A 135 grain Sierra JHP has a muzzle velocity of near 1450 fps (test barrel & full-size Govt Models) and can produce an astonishing 600plus ft/lbs of energy. A 150gr or 155gr Hollow Point moves out at near 1330fps. The performance level of this new cartridge rivals the time honored 357 Magnum or the hottest loads in the 10mm.



The 400 COR-BON is a real screamer, pushing a 135gr JHP at near 1450 ft/sec. Almost any .45 ACP pistol can be made to chamber the 400 COR-BON with a simple barrel conversion.

Cartridge designer Peter Pi recognized the universal appeal of the .45 ACP firearms, and also saw the expanded use of 10mm and 40 caliber weapons in law enforcement. It then made sense to combine the best of both worlds into one new cartridge - thus the concept for the 400 COR·BON.

By taking .45ACP brass and necking it down to accept a 40 caliber (10mm) bullet, you gain a velocity and energy advantage over either cartridge alone. These advantages are most noticeable in the lighter weight bullets 135 to 165 grains.

The 400 COR·BON seems to be the right idea - at the right time. There are probably more custom gunsmiths working on .45's than any other caliber. The 400 COR·BON is <u>not</u> a high pressure cartridge, and thus does not need special frame modifications. Most .45ACP pistols can be easily converted to the 400 COR·BON with a simple drop-in barrel change. You can utilize the same magazines, springs and guide rods and because of the modern bottleneck design, fully supported barrels can be used. Hundreds of these barrels have been made to date.

The 400 COR·BON adds performance to a .45ACP with a .40 caliber bullet. As Peter Pi explains, "*Velocity is the key to making hollowpoint bullets work. The added velocity assures that the hollowpoint will open up even if plugged with material. This reduces the risk of over penetration and allows the action of the hollowpoint bullet to dump the available energy into the target.*"

400 COR-BON

The new 400 COR-BON is attracting a lot of attention and we are fielding calls daily from shooters wanting to shoot this exciting new cartridge.

COR-BON is not a barrel manufacturer, nor do we stock or wholesale barrels or dies. Barrels for the new 400 COR-BON are available however through several sources. Your local dealer has access to the 400 COR-BON barrels through the distributors that they buy the COR-BON ammunition from. These same dealers will also be able to order your die sets, bullets and brass for reloading.

Most gunsmiths and custom gun manufacturers can also build a drop-in or a fitted barrel specifically designed for your gun.

Load data and information is available direct from COR-BON.

We appreciate you interest in the COR-BON line and hope that we meet your expectations.

You can buy barrels and conversions from: **Your Local Gun Dealer**
